WASHINGTON, DC

Quality Floors

DC'S WWAC REOPENING

As summer approaches, community pools once again become a welcome escape from the heat. Behind every great aquatic facility is careful planning, not just in engineering, but in creating a space that is both functional and visually appealing.

MAKING A SPLASH

On Memorial Day, the Woodrow Wilson Aquatic Center in Washington, D.C., reopened its doors after a major renovation, the facility now serves students, residents, and veterans alike. With a 25-yard-by-50-meter competition pool, leisure pool, and therapeutic areas that support both recreation and rehabilitation. The center has turned into a key asset to the community.

Over time, the original tile and sheet vinyl flooring had deteriorated, becoming worn, difficult to maintain, and costly to keep clean. The project required a solution that would not only restore the space but also improve long-term performance and reduce maintenance demands.

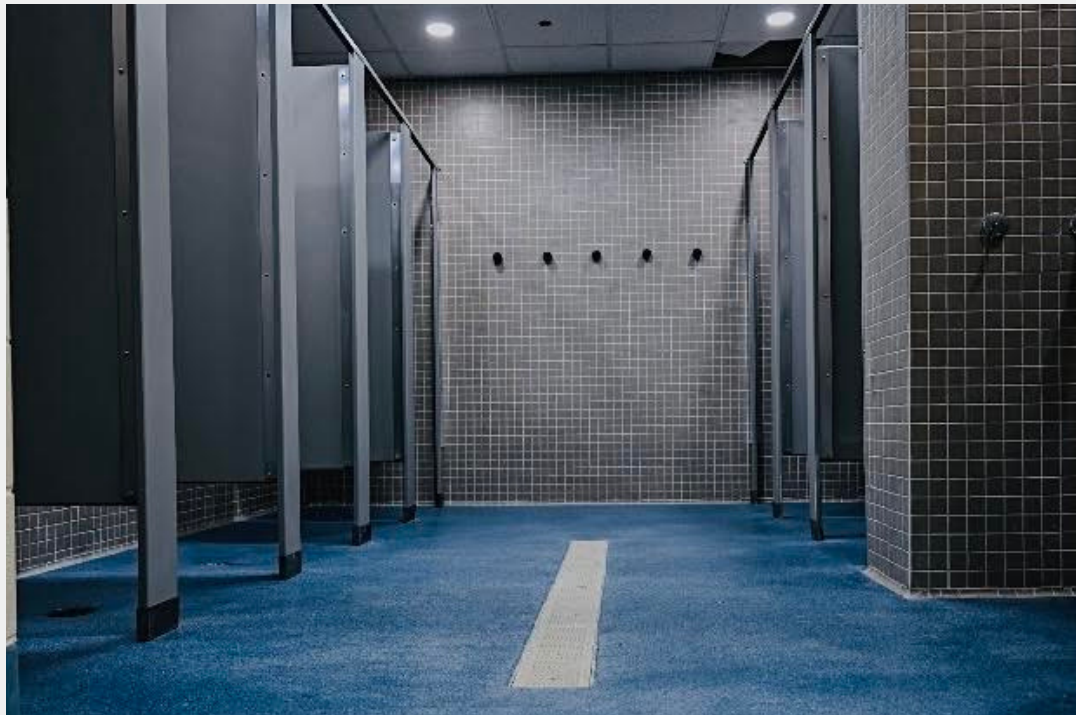

RAISING THE STANDARD

G.A. Flooring was brought to deliver a durable solution tailored to the demands of a high-traffic aquatic environment. Thanks to our over 20 years of experience and craftsmanship, our team developed and executed a system designed for durability, safety, and ease of maintenance. To properly restore and slope the pool deck, we installed a high-performance polyurethane mortar system designed to withstand constant moisture and demanding conditions. For the main deck areas, we applied a decorative quartz broadcast system that delivers long-term durability while providing a textured, slip-resistant surface—critical for safety around wet environments. In the mechanical rooms, we installed a seamless waterproofing system designed to handle extreme moisture and protect critical infrastructure.

Using only trusted, research-backed products, every step of the process from initial consultation through final installation—was completed to meet the highest standards and ensure optimal long-term performance. Every project presents its own challenges, and this was no exception, but our main focus is to always deliver the right solution for the environment, combining industry knowledge, quality materials, and precise installation to achieve results our clients can rely on.

BUILT TO PERFORM

Today, the Woodrow Wilson Aquatic Center stands as a revitalized community hub—safe, durable, and is built for long-term use. The project reflects G.A. Flooring's commitment to meeting customer needs with tailored, high-quality flooring solutions and delivering results that exceed expectations from start to finish.

PROJECT

Woodrow Wilson Aquatic Center
Washington, DC
